

Electric Fuel-Water Level Senders

- Suitable for Gas, Diesel or Water
- 316 Stainless Steel
- SAE 5 Hole Pattern
- 240-33 OHMS- other resistances available upon request
- Constructed to meet and/or exceed all applicable ISO standards

Measurement is done by series of reed switches positioned inside the level tube. A float with built in magnets then triggers the reed relays generating a potential-free resistance with an ohm value that increases or decreases. Resistance output is fully customizable.

The float is the only moving part of the sensors, thereby minimizing potential mechanical failures. All sensors are fully insulated to protect against voltage inside the tank.

1 1/4" or 1 1/2" NPT available, please call for pricing.
