

QR Series™ DTS Billet Controls

Triple Switch

DTSXBS22T

DTSXBS11D

Introducing **Livorsi Marine's**

New QR Series™ throttles (Quick Response) designed specifically for all Mercury compatible DTS engines. These ergonomically designed knobs are very comfortable on the palm of your hand for long periods of throttling. The shorter levers and throw of the **Livorsi QR Series™** make this control great for tight dash spaces and aggressive throttling. With up to 3 trim switches integrated into the knob, your hand never has to leave the control. Electronic shifting and throttle make it easier to maneuver in tight docking spaces. Create your own color combination to make this control look and feel like a custom built control.

Features

1. Available with 1, 2 or 3 switches in knobs for trimming tabs, drive, jack plates or a function of your choice.
2. Standard color is Chrysler Chrome* with your choice of 10 brilliant powder coated colors on knobs and base.
3. Tube is integrated into the handle. No exposed tube for trim switch wires.
4. Base plate has no screw holes exposed for a clean hi-tech look.
5. Available in single and twin configurations.
- 6 DTS controls work on Mercury and Cummins DTS ready engines only.
7. Easy adjustments for friction and detent. No need to remove control to adjust.

*Chrysler Chrome is a Livorsi bright chrome billet aluminum process with double the chrome thickness and nickel to make this billet QR Series control impervious to salt water corrosion.
