QR Series™ DTS Billet Controls

Introducing Livorsi

Marine's New QR Series™ throttles (Quick Response) designed specifically for Mercury Marine's DTS compatible engines. These ergonomically designed knobs are very comfortable on the palm of your hand. The shorter levers and throw of the Livorsi QR Series™ make this control great for tight dash spaces. With up to 3 trim switches integrated into the knob, your hand never has to leave the control. Electronic shifting and throttle make it easier to maneuver in tight docking spaces. Create your own color combination to make this control look and feel like a custom built control. Available in single and twin engines.

Features

1. Knobs are available with 1, 2 or 3 switches for trimming tabs, drives, jack plates or a function of your choice.
2. Controls come standard with a Chrome* finish, however, 10 brilliant colors are available on knobs and the base plate assembly.
3. Base plate has no screw holes exposed for a clean hi-tech look.
4. Available in single, twin configurations or Shadow Mode.**
5. DTS controls work on Mercury and Cummins DTS ready engines only.
6. Easy adjustments for friction and detent. No need to remove control to adjust.

*Chrysler Chrome is a Livorsi bright chrome billet aluminum process with double the chrome thickness and nickel to make this billet QR Series control impervious to salt water corrosion.

**Shadow Mode describes a 4 handle control (2 shifts 2 throttles) that can run 2, 3 and 4 engines with an optional Mercury trim panel.
