

# Livorsi DTS Controls

## Digital Throttle & Shift

Livorsi Marine, Inc. has obtained a license from Mercury Marine which allows us to combine DTS (Digital Throttle and Shift) technology with the options and quality of Livorsi controls.

Livorsi Smartcraft® DTS controls provide smooth and safe shifting. Direct drive of throttle position sensors results in faster response times giving you complete control of your boat. These controls are designed to work on all Mercury I/O and OB DTS compatible engines. Single, twin triple and quad configurations are available in a variety of styles and colors.

These DTS controls are small and light; constructed of stainless steel and billet aluminum for years of dependable service. The user has the ability to adjust tension for each handle. The ergonomically designed knobs feature your choice of single or twin drive trim switches or momentary up and down switches.

Livorsi DTS Controls  
for all Mercury DTS  
compatible engines

Optional Contour base  
in chrome or with  
a powder coat finish
